

TwoTypesOfApplets

```
import java.applet.Applet;
import java.awt.*;
import java.awt.event.*;

public class TwoTypesOfApplets extends Applet {

    String type;

    public void init() {
        // Get applet type from HTML parameter
        type = getParameter("type");

        if (type == null) {
            type = "Standalone";
        }

        setBackground(Color.WHITE);
    }

    public void paint(Graphics g) {

        if (type.equalsIgnoreCase("Embedded")) {

            g.setColor(Color.RED);
            g.setFont(new Font("Arial", Font.BOLD, 18));
            g.drawString("HTML Embedded Java Applet", 80, 80);

            g.setFont(new Font("Arial", Font.PLAIN, 14));
            g.drawString("This applet is embedded inside an HTML page.", 50, 115);

        } else {

            g.setColor(Color.BLUE);
            g.setFont(new Font("Arial", Font.BOLD, 18));
            g.drawString("Standalone Java Applet", 90, 80);

            g.setFont(new Font("Arial", Font.PLAIN, 14));
            g.drawString("This applet is run using AppletViewer.", 70, 115);
        }
    }

    public static void main(String[] args) {

        // Create a frame to demonstrate the Stand-alone Applet
        Frame frame = new Frame("Standalone Applet");

        TwoTypesOfApplets applet = new TwoTypesOfApplets();

        applet.type = "Standalone";
        applet.setBackground(Color.WHITE);

        frame.add(applet);
        frame.setSize(450, 200);
    }
}
```

```

        frame.addWindowListener(new WindowAdapter() {
            public void windowClosing(WindowEvent e) {
                System.exit(0);
            }
        });

        applet.init();
        frame.setVisible(true);
    }
}

```

HTML CODE:

```

<html>
<head>
    <title>HTML Embedded Applet</title>
</head>

<body>

<h2>HTML Embedded Applet</h2>

<applet code="TwoTypesOfApplets.class"
        width="450"
        height="200">
    <param name="type" value="Embedded">
</applet>

</body>
</html>

```

Output:

Standalone Applet

Standalone Java Applet

This applet is run using AppletViewer.

HTML Embedded Applet

HTML Embedded Java Applet

This applet is embedded inside an HTML page.
